

Self Designed App 2

I want to create an EXPENDIT APP app. Expendit **App** is your friend when it comes to managing your transactions and **tracking** your **expenses**. It will help you to keep a track on your expenses and know how much you spent on which thing and save money on unwanted expenses...

USER STORIES FOR EXPENDIT APP:-

Administrator:-

As an administrator, I want users to sign up and login to the app so that they are authenticated users.

As an administrator, I want users to add their expenses list to the app so they can keep a track on their expenses and know how much they spent on which thing.

As an administrator, I want users to set their expenses limit so they can not exceed their limit.

As an administrator, I want users to take advantage of the view expenses details screen where they can see expense description, expense spent amount and cash-or-card, and also the date of transaction.

USER:-

As a user, I want to add my expenses list to the app so that I can keep a track on my expenses.

As a user, I want to set a limit to my expenses so that after that limit I can't spend on unwanted things.

As a user, I want to update my profile anytime in the settings screen so that I can change my limit and name whenever I want.

As a user, I want to see my expense details so that I know the type, description and date of transaction.

**WIREFRAME COMING IN NEXT
PROJECT :)**
